Technical English in Civil Engineering (TECE 141220)

Autumn 2019

Department of Civil Engineering / School of Civil Engineering and Architecture

Hebei University

Dr. Xingzheng WU

E-mail: xingzhengwu@gmail.com

Course Goals

Technical English in Civil Engineering (TECE) is an optional professional course for both undergraduates and graduates major in civil engineering. The purpose of this course is to help students improve their command of technical English in Civil Engineering and give them skill and practice in using English.

Technical terms in fields of: concrete, materials science, construction, geotechnical, road, structures, transportation, and water resources, are discussed. The following aspects are also included. Basic technical vocabulary, numbers and mathematical expressions, physical quantities and units, basic concepts for the presentation of technical interrelationships as well as basic grammatical structures of English like verb tenses, passive constructions and relative clauses.

A sad love story of an Engineering student

A guy was deeply in love with his classmate.

One day he proposed her by saying that **he loved her** a lot....

But she was angry and refused and threatened him that she'd complain to the Principal if he ever bothers her again.

One day the girl borrowed a text book from that boy and wrote a message "**I love you too, I'm sorry to hurt you the other day. if u've forgiven me, please come and talk to me and never leave me.**" in that book.

But the guy never talked to her.

4 yrs went away and nothing has happened..
